

## HPC in the Clinic – Merge of clinical usage and research eInfrastructure

Ole Saastad, PhD  
Division for Research Computing Services  
University Centre for Information Technology (USIT)  
University of Oslo

**UNINETT**

sigma2

# Agenda

- Sensitive Data & GDPR
- What is TSD
- Examples with TSD and GDPR
- Clinical use of HPC

# Sensitive data in the light of GDPR

~~Sensitive data~~ → ***Special categories of personal data***

«Processing of personal data revealing racial or ethnic origin, political opinions, religious or philosophical beliefs, or trade union membership, and the processing of genetic data, biometric data for the purpose of uniquely identifying a natural person, data concerning health or data concerning a natural person's sex life or sexual orientation shall be prohibited.»

Except:

- **Consent, but still kept safe**
- Needed by state of employer; while still keeping data safe
- Data made manifestly public by that data subject
- **Medical treatment**, but still kept safe
- And a few more...

# Ownership of the data

- EU commission does not really talk of ownership of this type of data;

but the right to **control the data**, and **to control whom may access and store it**

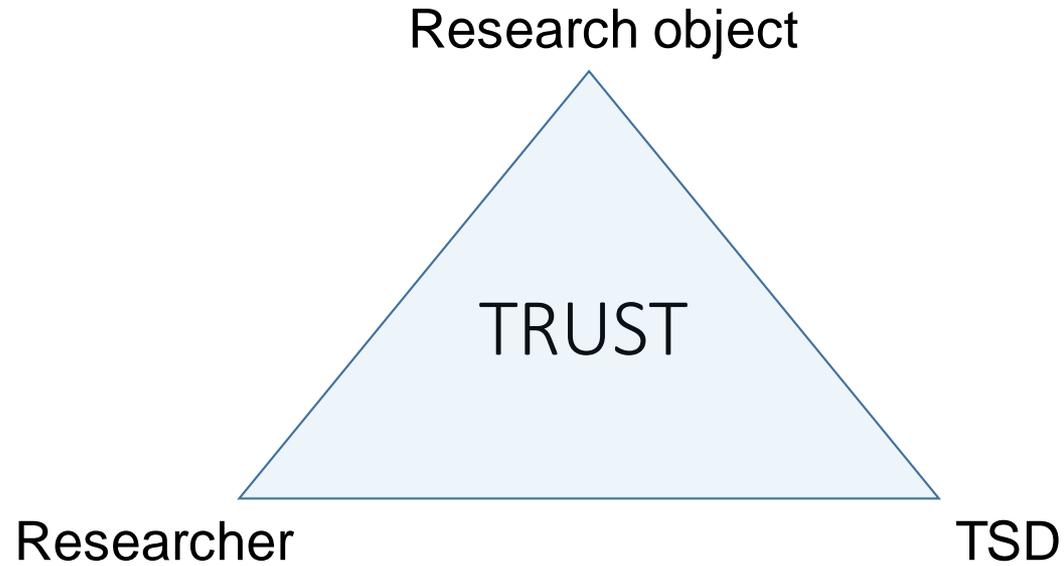

# You may handle all types of data in TSD

.... if you are entitled

.... if you comply to the data minimization principle

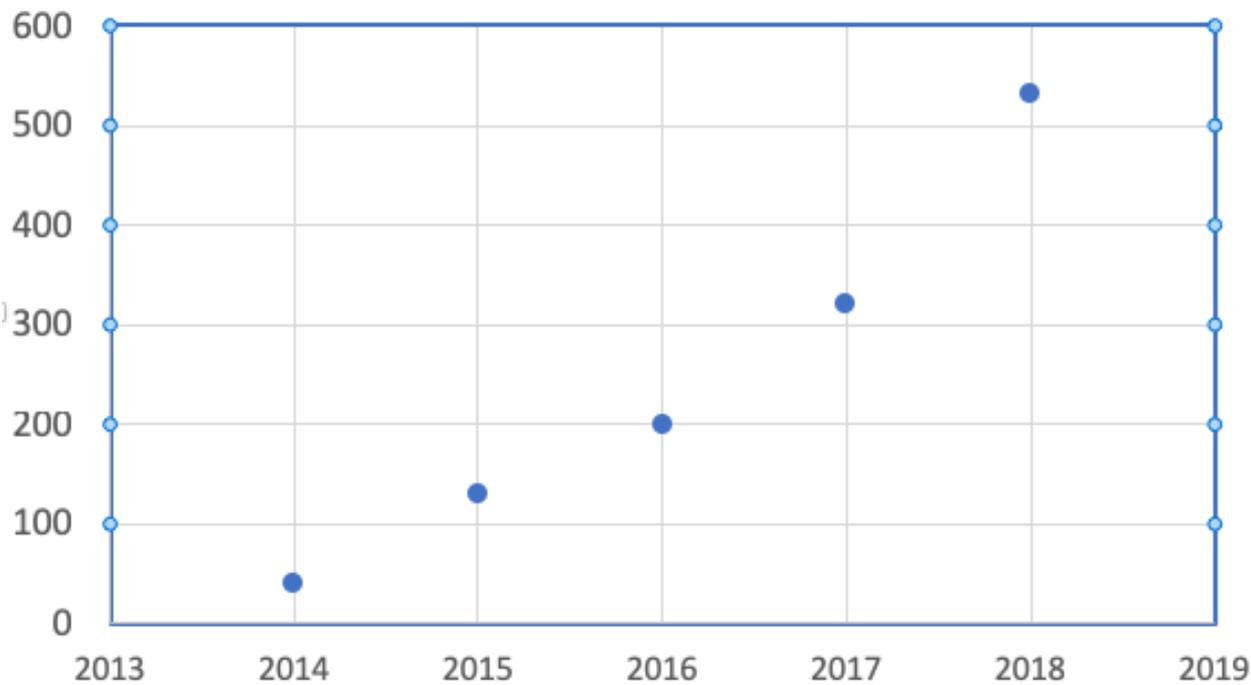

# *TSD – Services for Sensitive Data*

*An infrastructure for high security data*

- ▶ PaaS
  - ▶ remote login, with Two Factor Authentication
  - ▶ Windows and linux VMs
  - ▶ web services
- ▶ On-location data center
  - ▶ VMware
  - ▶ virtual enclaves for projects
  - ▶ layer 2 and layer 3 network separation
- ▶ HPC
  - ▶ 2000 CPU core cluster
  - ▶ GPU nodes
  - ▶ FPGA gene sequencer
- ▶ APIs for app development

#Active projects at the end of the year

> 2,5 PiB data

> 3000 users

> 2000 VMs

> 17 organisations

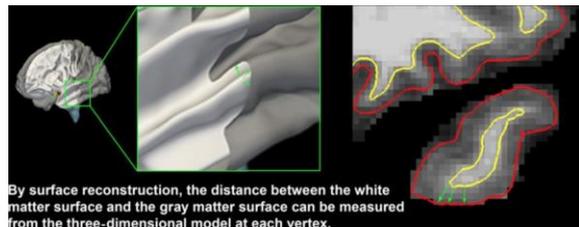

~ 10 full time positions

+ Clinical production

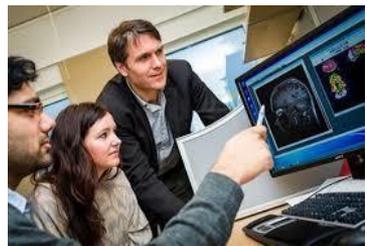

Export/import API

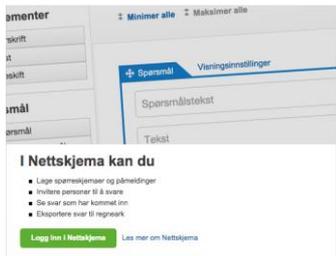

Compute, analyse and store data

Collaborate / share

Data capture

Web forms

Consent Service

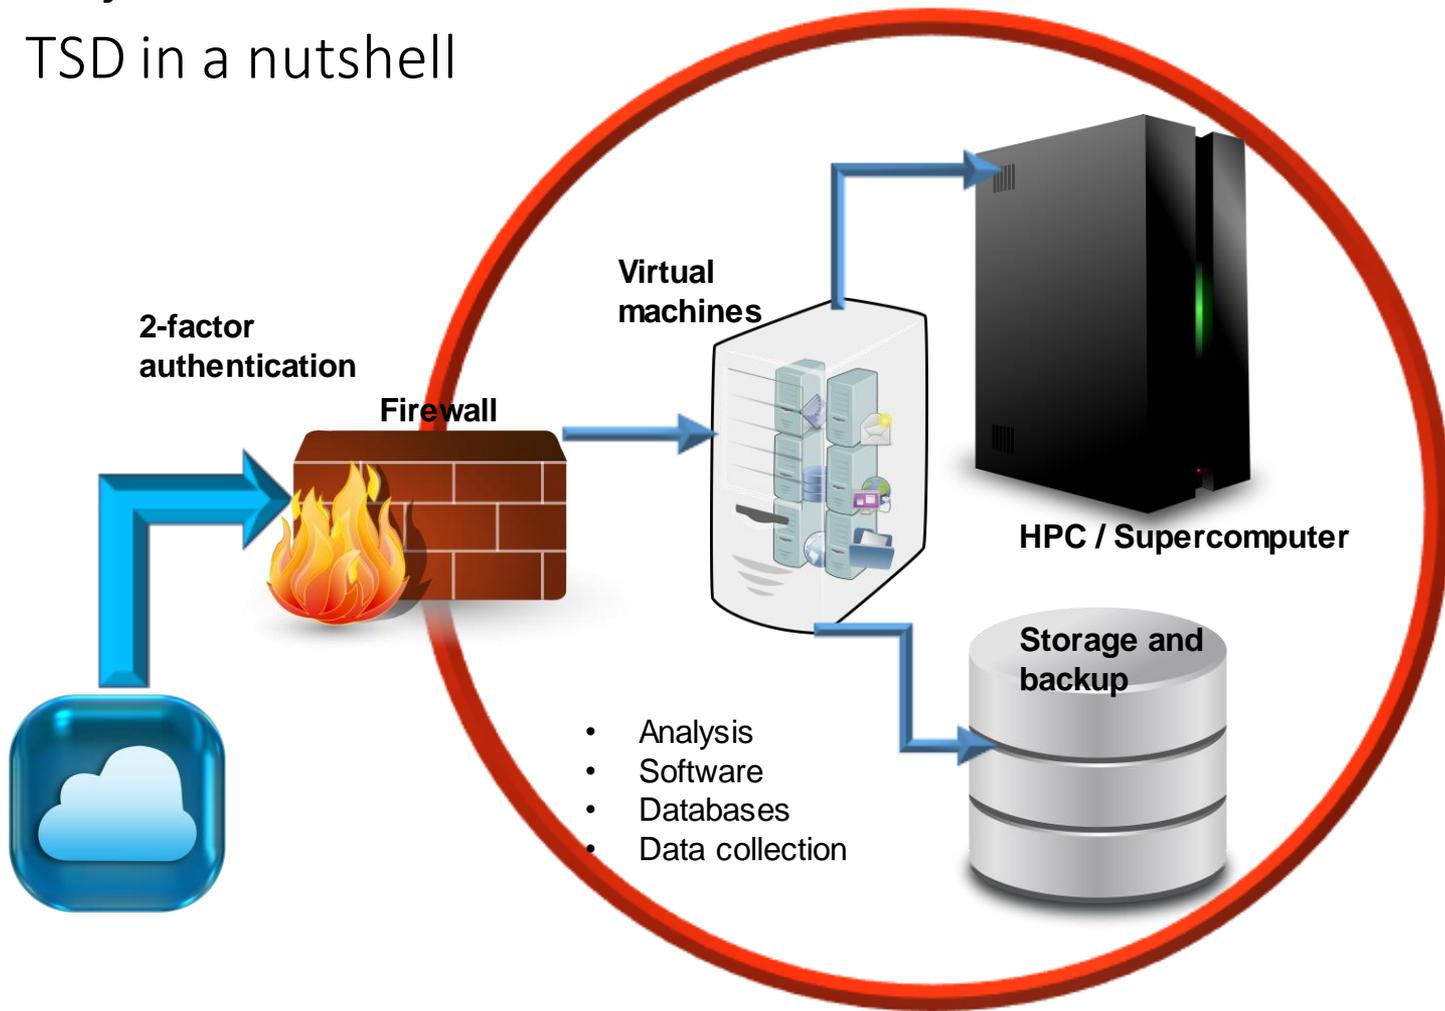

Feedback services

Analysis

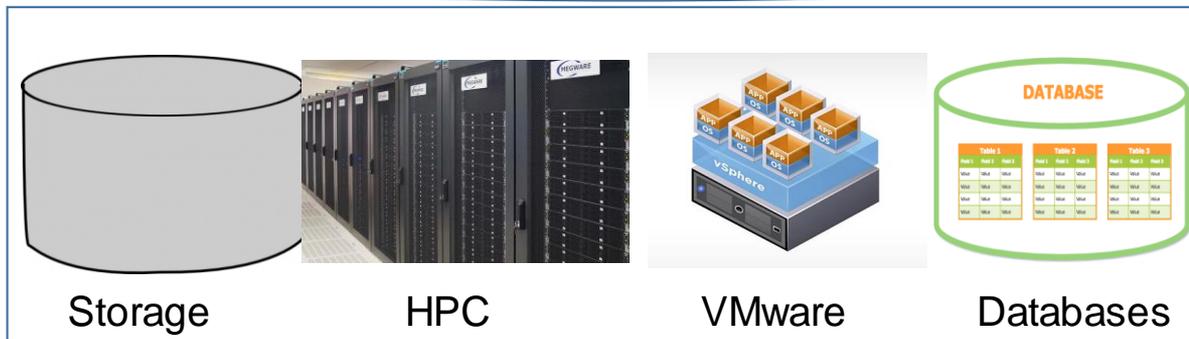

# TSD in a nutshell

Routing, firewall, integration architecture, API and authorization

Slow development

Lightweight IT

Heavyweight IT

## GDPR basics

- The right to know
- The right to control and see your data
- The right to be forgotten

## Human basics

- What's in it for me?

# Precision medicine in TSD – Example 1

- Oslo University Hospital – Dept of Medical Genetics
  - Rare diseases
  - Newborn screening
  - Inherited Cancer – and a few other cancer sample types

# Precision medicine and IT

- Target the disease and in many cases the actual genetic and molecular footprint of the disease rather than for example treating cancer based on the tissue in which the tumor resides
- Breaks the clean distinction between research and clinic
  - One patient -> One research project
- Requires agile development platforms integrated with eInfrastructures that can handle rapid development and change

## Avdeling for medisinsk genetik

Avdeling for medisinsk genetik er landets største medisinsk genetiske avdeling og arbeider med utredning av arvelige sykdommer og forskning på arvelige årsaker til sykdom.

### Avdeling for medisinsk genetik

Avdeling for medisinsk genetik er landets største medisinsk genetiske avdeling og arbeider med utredning av arvelige sykdommer og forskning på arvelige årsaker til sykdom.

Hovedvirksomheter ved avdelingen er klinisk genetisk utredning, genetisk veiledning inkludert veiledning i forbindelse med fosterdiagnostikk, genetisk laboratoriediagnostikk og genetisk forskning.

Avdelingen ledes av professor Dr.med. Dag Undlien, og er organisert i seksjoner. Laboratorievirksomheten er samlokalisert ved Ullevål sykehus og den kliniske virksomheten ved Rikshospitalet

Avdelingens drift utføres i samsvar med [Lov om medisinsk bruk av bioteknologi](#).

# Issues at Oslo Univ. Hospital

- No HPC
- No agile development
- No storage suited for these data types
- No support on systems suited for DNA-sequencing

# Clinic versus research – admin challenges

- Special data handler agreements
- SLA wanted at 99.999% uptime
- If TSD is down 4 hours demands extra crisis measurements at the hospital
- TSD personell not contracted for work off regular hours
- No financial room for test and development platform

## TSD delivers to Dept of Medical Genetics:

- Storage for approx 0,5 PiB of exome sequencing data
- HPC capacity for 6000+ exomes per year (moving to full genomes)
- An internal web application where medical geneticists do the mutation assesement and diagnosis (50-80 active users every day)
- Long time storage of all data
- Excessive logging and auditing
- Versions of all software used in the clinic
- Diagnostic reports are copied back to the EPJ

# Dragen FPGA accelerator for special samples

When in a hurry use accelerators, 22 minutes on one full genome.

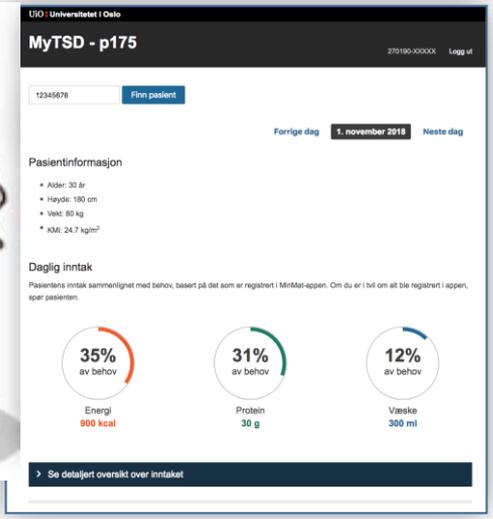

HPC walltime approx 22 hrs with todays pipeline.

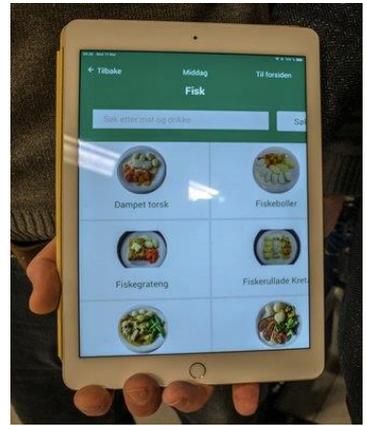

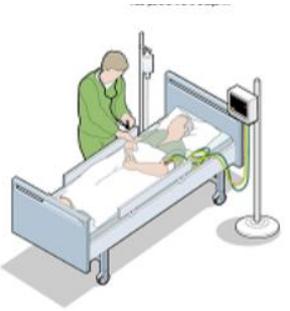

# Technical challenges

- Millions of small files – high IO load and metadata load
- Nasty neighbour problem – HPC is a shared resource QoS
- Windows VMs must access results that resides on BeeGFS
- Software updates, patching etc inside a «closed environment»
- Secure data transport
  - From DNA sequencers to TSD
  - From TSD back to Electronic Patient Journal (EPJ)

# Precision medicine example 2

# MinMat project at Rikshospitalet

# Precision medicine example 3

# LetsGo-project at «Sørlandet» hospital, 2019

## App with AI

# Precision medicine example 4

# Kidney transplant monitoring

UiO • Realfag og teknologi

- Det er veldig individuelt hvor mye immundepende medisin ulike pasienter trenger. Derfor er det veldig viktig å finne den riktige dosen til hver pasient, forteller Anders Åsberg ved Farmasøytisk institutt. Bruk bildet.

## App for transplanterte

Folk som har fått transplantert nye organer må ta en nøyaktig dose immundepende medisiner to ganger daglig resten av livet. Farmasøytisk institutt og USIT skal nå utvikle en mobil-app som kan hjelpe pasientene med å huske på de livsviktige medisinene.

av Gunhild M. Haugnes - 11. november, 2015

<https://titan.uio.no/node/983>

## Strategic and development roadmap

- ▶ strategic
  - ▶ consolidate as national service via public institutions
  - ▶ enhance interoperability with other European sensitive data infrastructures
  - ▶ project participation
  - ▶ continue rollout of application development platform
- ▶ GDPR related development
  - ▶ full feature implementation of the GDPR for survey data
  - ▶ enforce consent on collection and usage
  - ▶ right to insight
  - ▶ right to access
  - ▶ right to be forgotten

## National, Nordic, European collaboration

- ▶ Sigma2
  - ▶ funded by Dept. of Education and Research
  - ▶ project owner: involves all Norwegian Universities
  - ▶ partner in Nordic and European projects
- ▶ Tryggve2
  - ▶ Nordforsk/NeIC funded project
  - ▶ Norway, Sweden, Denmark, Finland
  - ▶ sensitive data use cases in the Nordics
- ▶ EOSCHub
  - ▶ TSD in the portfolio of services
  - ▶ developing metadata service for sensitive data
  - ▶ containers for reproducible science
- ▶ PRACE
  - ▶ UiO leads the containers Work Package

# Digital dynamic consent system

The screenshot shows a web browser window with the address bar displaying "https://nettskjema.no/index.html?defaultTargetUrl=1". The page header includes the UiO logo and the text "Universitetet i Oslo". Navigation links for "English" and "Nynorsk" are visible. The main heading is "Nettskjema" with a subtitle "Spørreskjemaer, påmeldinger og bestillinger" and a "Hjelp" link. The content area is divided into several sections: a left sidebar with a "Minimer alle" / "Maksimer alle" toggle, a "Spørsmål" section with a "Visningsinnstillinger" dropdown, and a "Nylige endringer" (Recent changes) section listing updates from 2018 and 2019. A bottom section titled "I Nettskjema kan du" lists user capabilities like creating forms and viewing answers.

### Nylige endringer

- **Åpent seminar om datainnsamling i forskning**  
25. jan. 2019 11:18
- **Nytt i Nettskjema våren 2019**  
14. jan. 2019 10:19
- **Nettskjema.no**  
29. nov. 2018 12:38
- **Dropin veiledning Tjenester for Sensitive Data (TSD) og Nettskjema**  
2019-01-17

### I Nettskjema kan du

- Lage spørreskjemaer og påmeldinger
- Invitere personer til å svare
- Se svar som har kommet inn
- Eksportere svar til regneark
