Wilson McKerrow, Ph.D. (NYU)

CANCER GENOMICS CLOUD
SEVEN BRIDGES

Multi-omic data is critical for cancer research

Comprehensively understanding the full picture of a research question requires examining multiple modalities

Ritchie et al., Biological systems multi-omics from the genome, epigenome, transcriptome, proteome and metabolome to the phenome. (2015)

Nature Reviews | Genetics

The Seven Bridges Cancer Genomics Cloud

A Cloud Resource within the NCI Cancer Research Data Commons for secure storage, sharing & analysis of petabytes of public, multi-omic cancer datasets

The Seven Bridges Cancer Genomics Cloud has been funded in whole or in part with Federal funds from the National Cancer Institute, National Institutes of Health, Contract No. HHSN261201400008C and Task Order No. 17X146 under Contract No. HHSN261201500003I.

The Seven Bridges Cancer Genomics Cloud

- A stable, secure, and highly customizable cloud storage and computing platform
- A user-friendly portal for collaborative analysis of petabytes of public data alongside private data
- An optimized venue for reproducible data analysis using validated tools and pipelines
- Register for free today at **cancergenomicscloud.org**

Easy data
management

Scalable
computation

Optimized
bioinformatics
algorithms

Secure
collaboration

Flexible & fully
reproducible
methods

Extensible and
developer-friendly
platform

Need for Cloud Resources was motivated by the growth of TCGA

NATIONAL CANCER INSTITUTE THE CANCER GENOME ATLAS

TCGA BY THE NUMBERS

TCGA produced over

2.5

PETABYTES
of data

To put this into perspective, 1 petabyte of data
is equal to

212,000

DVDs

TCGA data describes

33

DIFFERENT
TUMOR TYPES

...including

10

RARE
CANCERS

...based on paired tumor and normal tissue sets
collected from

11,000

PATIENTS

...using

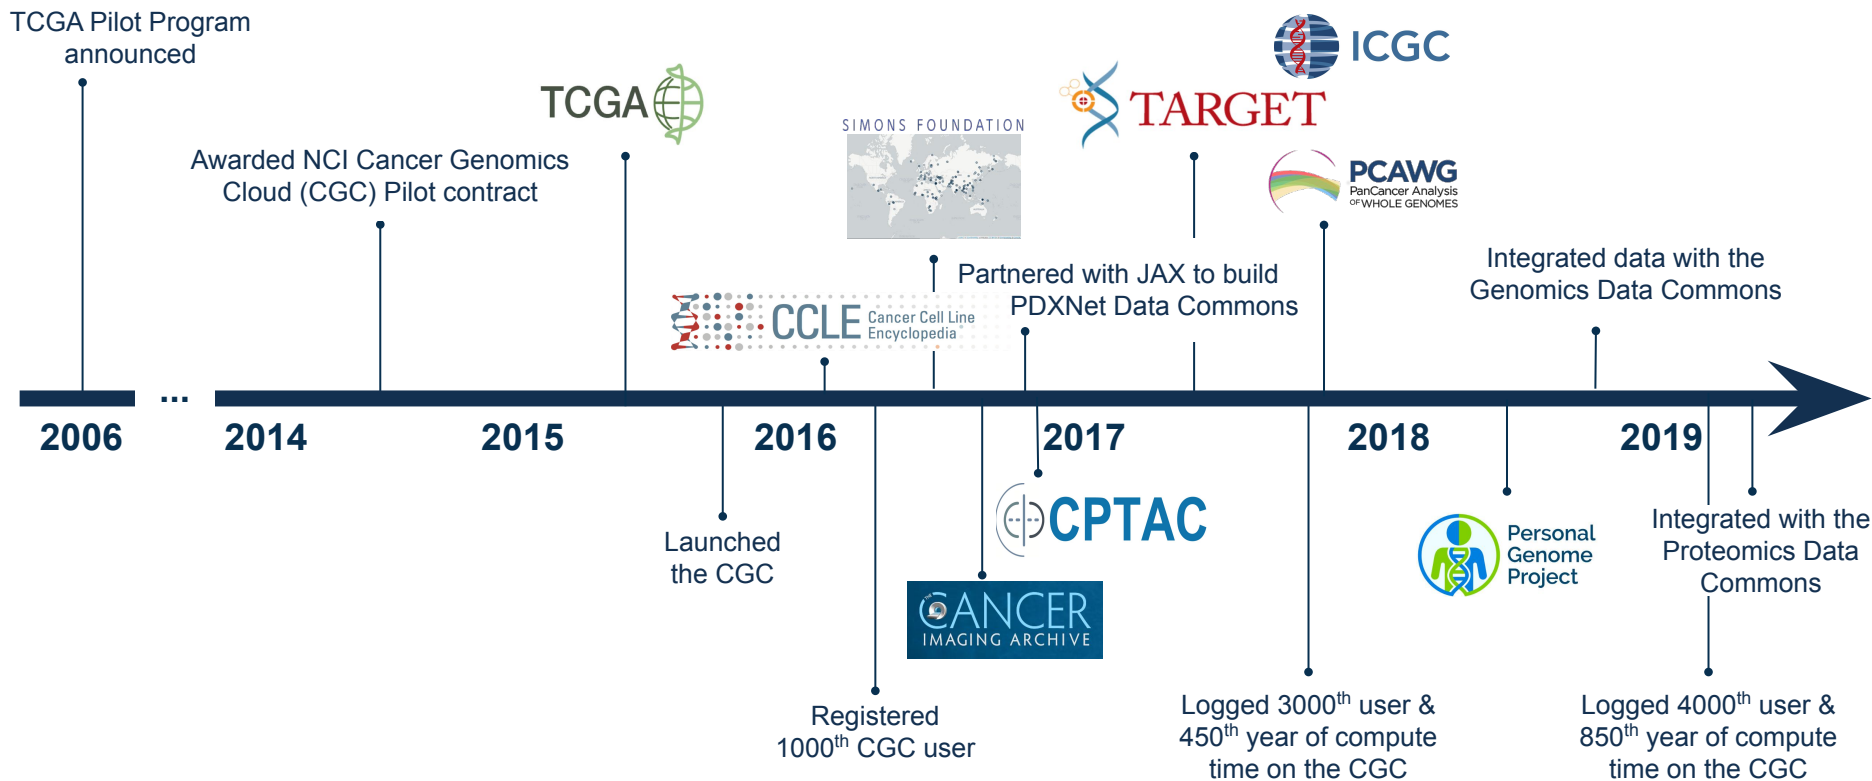

7

DIFFERENT
DATA TYPES

Growth of the Cancer Genomics Cloud Ecosystem

Proteome Data Commons – democratize access to cancer-related proteomic datasets

Enabling multi-omic research on the CGC

- *Many* research questions go beyond genomics data
- Enabling access to the PDC will allow CGC users to **access** and **compute** on data in Proteomics Data Commons in a project on the **CGC**
- Collaboration with Wilson McKerrow, postdoc in David Fenyo's lab
 - Specific use case of analyzing **proteomic**, **genomic**, and **transcriptomic** data side-by-side in **same project**, ideally for **matching cases** of all 3
 - Useful datasets with all 3 modalities: TCGA, CPTAC-1-

User flow to compute on PDC files

NATIONAL CANCER INSTITUTE Proteomic Data Commons

1. User starts on PDC portal to identify cohort of files
2. User downloads **files manifest** of selected cohort
 - a. Note - there are multiple manifest options on the PDC, only the “files manifest” will work

CANCER GENOMICS CLOUD
SEVEN BRIDGES

1. User moves to CGC, creates a project
 - a. Files → Add files → Import from PDC
2. User prompted to upload the manifest from the PDC
3. PDC files copied into user's project
 - a. FileID → file URL via Fence

LINE1 retrotransposon project
